Introduction

The knowledge about the distribution of many species within the family Dermestidae is still incomplete. There are a lot of gaps in our understanding of the occurrence of many of those species. Thus, each paper increasing our knowledge in this field is valuable.

In this paper new faunistic records of 16 species belonging to the family Dermestidae (Coleoptera) are given. The article is a continuation of a series of eleven previous articles (e.g. Háva & Hermann 2014; Háva et al. 2014).

Material and methods

Species are arranged in alphabetical order, with the nomenclature and zoogeography according to Háva's catalogues (Háva 2003, 2007).

The following abbreviations refer to the collections where the examined materials are deposited:

AHEC: Private collection of Andreas Herrmann, Stade, Germany.

JHAC: Jiří Háva, Private Entomological Laboratory & Collection, Únětice u Prahy, Prague-west, Czech Republic.

MHNG: Museum d'Histoire Naturelle, Genève, Switzerland.

NME: Naturkundemuseum, Erfurt, Germany.

SMNS: Staatliches Museum für Naturkunde, Stuttgart, Germany.

ZMUB: Humboldt-Universität, Museum für Naturkunde, Berlin, Germany.
